

Deputy Chief Engineer

Pittsburgh Regional Transit is seeking a Deputy Chief Engineer to assist the Chief Engineer in the development and implementation of all major capital engineering and construction projects, including areas of engineering design, construction, project programming, and technical support for the rail and bus operations as required. Maintain the Pittsburgh Regional Transit (PRT) asset inventory to a state of good repair.

Essential Functions:

- At direction of Chief Engineer, provide leadership and direction for Capital Projects and Programs of critical importance to the PRT to achieve strategic goals and initiatives.
- As required, provide support for the activities of the division's department directors, managers, and staff, ensuring Chief Engineer's intent is implemented in support of PRT.
- As required, assist Chief Engineer in the oversight of the Technical Support team in providing the required engineering and technical services and support for the activities of the Operations Division in the areas of railcar programs and facility, rail system and bus-way maintenance and rehabilitation.
- As required, assist Chief Engineer in managing staffing, technical and control issues (such as budgets, schedules, reporting, safety, and quality assurance) required in implementing engineering and construction projects. Oversees the management of third-party consultants and contractors. Directs activities necessary to perform project coordination with various departments within the PRT.

Job requirements include:

- Bachelor of Science degree in Engineering from an accredited school.
- Minimum of ten (10) years' progressively responsible capital project or multi-discipline design and construction experience, with at least five (5) years in a senior level position.
- Minimum five (5) years supervisory experience.
- Demonstrated experience in managing asset management program.
- Demonstrated history of oversight of both operating and capital budgets.
- Professional Engineer Registration in Pennsylvania.
- Professional and effective communication skills.
- Demonstrated ability in the use of Microsoft Office 365 software products.
- Valid driver's license.

Preferred attributes:

- Master's degree in Engineering, Business Administration, Public Administration, Urban Planning or directly related field.
- Transit Asset Management experience is preferred.
- Experience in rail operations management, including system and equipment maintenance, system design and construction supervision, engineering management and project management.
- Demonstrated ability to deliver presentations, answer questions, and address stakeholder concerns in highly stressful public forums.

We offer a comprehensive compensation and benefits package. Interested candidates should forward a cover letter (*with salary requirements*) and resume to:
